

MANSI NILESH SHIMPI

MSc Data Science Student | Aspiring Data Analyst / Data Scientist

shimpimansi87@gmail.com | [LinkedIn](#) | [Portfolio](#) | Bristol, UK

PROFILE

MSc Data Science student at the University of Bristol with an engineering background in Electronics & Telecommunication (CGPA 8.14/10) and nine months' hands-on experience as a Data Analytics Intern, building a cloud data warehouse on AWS. Skilled across the analytics pipeline — SQL, Python, PySpark and Power BI — with experience turning raw data into dashboards and predictive models. Currently seeking a part-time data analytics/data science internship in Bristol or remote to apply and grow these skills alongside my studies; eligible to work part-time (up to 20 hours/week in term time, full-time during university vacations) under my UK Student visa.

EDUCATION

MSc Data Science

University of Bristol, UK

Sept 2026 – Sept 2027 (Current)

BE, Electronics & Telecommunication Engineering

Savitribai Phule Pune University, India — CGPA: 8.14/10

2022 – 2026

TECHNICAL SKILLS

- **Languages & Tools:** Python, SQL, PySpark, Pandas
- **Cloud (AWS):** Redshift, S3, Glue, Lambda
- **Analytics & BI:** Power BI, data visualisation, predictive analytics, machine learning fundamentals
- **Other:** Git/GitHub, Microsoft & Coursera certifications in data-related fields

EXPERIENCE

Data Analytics Intern — Data Universe, Nashik, India

Nov 2025 – Jul 2026

- Completed a 9-month internship covering data preparation, analysis and problem-solving across live analytics projects, working within a 5-person team.
- Built a cloud-based data warehouse on AWS Redshift, integrating ~50,000 rows daily from 8 source tables via Amazon S3, AWS Glue and AWS Lambda into a single analytics-ready pipeline.
- Took end-to-end ownership of 3 pipeline components, and the automated pipeline replaced manual reporting work, saving approximately 5 hours per week.

PROJECTS

Cloud Data Warehouse on AWS Redshift

MySQL, S3, Glue, Lambda, Redshift

- Designed and built a pipeline migrating ~100,000 records from MySQL source systems into Redshift, cutting average query run-time from 10 minutes to 3 minutes.

Student Outcome Prediction System

Python, Machine Learning

- Built a predictive model on student performance data to flag learners likely to need earlier academic support.

Fraud Detection & Customer Churn Analysis (Ongoing)

Python, Pandas

- Analysing behavioural and transaction data to surface fraud signals and identify the key drivers of customer churn.

Economic Data Analysis & Sales Dashboard (Ongoing)

Power BI

- Exploring macroeconomic indicators for emerging trends and building a Power BI dashboard to track sales performance.

ADDITIONAL INFORMATION

- Certifications: Microsoft and Coursera (data & analytics-focused).
- Right to work: Currently on a UK Student visa, eligible to work part-time (up to 20 hrs/week in term time, full-time in vacations); eligible for the Graduate visa route on completion of MSc studies at Bristol.
- Available to start immediately; flexible with hours to fit around university timetable.
